Summary

Software Engineering student with strong capabilities in full-stack software development, system architecture, database management, and workflow automation. Experienced in building scalable web applications, designing RESTful APIs, optimizing software performance, and implementing secure, maintainable code using modern frameworks and cloud platforms. Demonstrated ability to streamline development lifecycles, improve system efficiency, and write clean, testable code. Skilled in algorithmic problem-solving, cross-functional collaboration, and delivering reliable software solutions in Agile and CI/CD-driven environments. Seeking a Software Engineering internship opportunity to apply technical design, development, and analytical skills in a dynamic technology organization.

Education

Universiti Tun Hussein Onn Malaysia **September 2024 – current**

Bachelor of Computer Science (Software Engineering) with Honours

CGPA 3.82

Kolej Matrikulasi Selangor **July 2023 - May 2024**

Sijil Matrikulasi KPM (Science Stream -Module 3, SDS)

Academics & Technical Projects

Dental Clinic Management System | Object-Oriented Software Developer

- Formulated system requirements by conducting stakeholder interviews with Klinik Pergigian Putra.
- Architected an object-oriented desktop application to streamline patient records and appointment scheduling.
- Designed relational database schemas and object models to maintain data integrity and user access rules.

Azura House Online Ordering System | Software Requirements & Web Developer

- Engaged with business stakeholders to analyze operational needs and produce formal SRS documentation.
- Developed a responsive web-based ordering application to digitize customer orders and menu tracking.
- Implemented front-end user interfaces and back-end data processing workflows to ensure smooth ordering UX.

Awards and achievements

- Dean's List Award (Anugerah Dekan) – Faculty of Computer Science and Information Technology (FSKTM), UTHM (May 2026)
- Head Committee – Program Tautan Ilmu FSKTM bersama PPD Kluang (July 2025)
- Volunteer & Event Participant – Bakti Siswa Rejo Sari Community Outreach Program (December 2025)

Technical Skills

- Programming Languages: Java, Python, JavaScript, C, C#, PHP, SQL, HTML/CSS
- Web Frameworks & Libraries: React.js, Angular, Vue.js, Node.js, Flask, Django
- Software Architecture: OOP Principles, MVC Architecture, RESTful API Integration
- Databases & Cloud: MySQL, Firebase Firestore, Firebase Authentication
- Networking & Protocols: Cisco CCNA 1 (ITN v7 - NetAcad), TCP/IP, Subnetting (VLSM)
- Developer Tools & Design: GitHub, Figma, Canva, VS Code

Certifications

- PeopleCert DevSkills: Software Development Skills Foundation (Python)
- PeopleCert DevSkills: Software Development Skills Advanced (Python)
- Cisco Certified Network Associate (CCNA 1): Introduction to Networks v7 Course Completion – Cisco Networking Academy
- Certified Tester Foundation Level v4 (CTFL v4) Course Completion – Awantec

Soft Skills

- Cross-Functional Collaboration: Operate effectively with cross-functional team members and project stakeholders to analyze software requirements.
- Agile & Scrum Methodologies: Active participant in Agile development workflows, sprint planning, task tracking, and iterative releases.
- Technical Design & Documentation: Adept at generating technical documentation, architectural diagrams, software requirement specifications (SRS), and API docs.
- Problem-Solving & Debugging: Methodical approach to root-cause analysis, software debugging, unit testing, and code refactoring.
- Technical Research & Continuous Learning: Eagerly conduct research on modern software frameworks, emerging design patterns, and engineering best practices.

Final Year Project

AI-Powered Real-Time Malaysian Sign Language (BIM) Recognition & Translation Application

- Architected a dual-platform assistive application combining a Flutter mobile app for end-users and a React/ Django web administrative dashboard.
- Engineered a low-latency, CPU-efficient computer vision pipeline (Camera → MediaPipe → BIM Model → Text-to-Speech) for real-time 3D hand landmark extraction and gesture classification.
- Implemented continuous gesture recognition converting Bahasa Isyarat Malaysia (BIM) signs into real-time text and synthesized audio output.
- Integrated local and cloud-synced SQLite/PostgreSQL databases with a Recognition History & Favorites Engine, User Profiles, and feedback reporting loops.
- Developed administrative oversight modules for user account management, error log tracking, and AI model performance analytics to guide retraining cycles.

Spoken Languages

- Malay (Native)
- English (Professional)
- Japanese (Elementary / JLPT N5 equivalent)
